ELF - Introduction with Code

You should read the task description as part of the reading material.

Make sure you know all of Lab 4 Reading Material well. In particular, it is very important that you understand ELF basic description diagram (see here).

In addition, you should read about the *mmap* system call (e.g. *man mmap*). Make sure you understand the different modes and flags in mmap, and how these relate to the open( ) system call.

For lab E you should also understand the **Linker pass 1 figure from the previous lecture.**
